

# Quiz training for FSG

DEPARTMENT

Team-wide · IFS-Tests

AUTHOR

Álvaro González

DATE

22.09.2026

# Every past quiz is one API call away

1,072

## QUESTIONS

With answers, images and worked solutions, 2011–2026

121

## QUIZZES

From 15 events. FSA and FSG are the best covered

~130

## API CALLS

To mirror the whole bank locally. Free, no key

# The quiz decides if we race at FSG

## What the FSG quiz looks like

- 9–12 questions per quiz
- 6–10 minutes per question, 1–2 hours in total
- Rules, engineering maths and scoring, all mixed
- Ranked against every other team: a few points decide the slots

## Where we stand today

- We cram the week before instead of training all season
- Nobody knows who in the team covers which topic
- 79 % of past questions have no worked solution
- No record of how we did or what we got wrong

# Phase 1: one command pulls the whole bank

## Mirror

- ~130 throttled calls, cached. Re-runs only fetch new quizzes

## Normalise

- 11 undocumented API quirks handled, one of which silently dropped 197 questions

## Explore

- Stats per event, year and type. Any question with its images and rulebook

## Tag

- First-pass split into mech, elec and rules, ready for human review

FIRST-PASS KEYWORD TAGS • ABOUT 70 % RIGHT ON A 40-QUESTION SPOT CHECK

# About 4 in 10 questions are mech, 3 in 10 elec

## 38 %

### MECH

Dynamics 131  
Structures 127  
Powertrain 112  
Aero 33

## 30 %

### ELEC

Electronics 199  
Batteries & HV 117  
Driverless 9

## 16 %

### RULES

Scoring, penalties and event  
procedures

## 16 %

### UNCLEAR

Trivia or no keyword match.  
Needs a human

02

# What we decide together

Everything from here on is a proposal, not a plan

# Six ideas to make it a habit

01

## Daily question

One per area every morning: mech, elec, rules. Two minutes

02

## Streaks & leaderboard

Individual and mech vs elec. Opt-in, first names only

03

## Weekly mock quiz

Replay a real quiz with its own clock: FSG 2024, FSA 2025...

04

## Beat the qualifier

Score against the last team that got a slot, where the data has it

05

## Solution bounty

Points for writing a worked solution. 79 % of questions have none

06

## Quiz-day drill

January rehearsal with the real quiz squad and their roles

# University sign-in, tracked in Notion

## Sign-in

- Microsoft sign-in limited to @alu.comillas.edu and @comillas.edu
- No passwords to manage; access ends with the uni account
- If Comillas IT blocks app consent: email magic link, same domain rule

## Notion

- Match each user by email to the members database
- Push weekly score and streak to their member page
- Leads see who covers which area before quiz day
- Store the minimum: name, email, answers (GDPR)

# Three ways to build it

## A • Repo only

- Mock quizzes from the command line
- No accounts, no leaderboard, no cost

## B • Chat + Notion

- A bot posts the daily question in the team chat
- Answers logged in a Notion database

## C • Web app

- Static site, Supabase for sign-in and data (free tier)
- Daily question, mock quiz, leaderboard

## Recommendation

- Pilot C for four weeks with only the daily question and leaderboard
- Keep A as the offline fallback

# Decisions for today

Each one leaves the room with an owner and a date

## TO DECIDE

1. Format: daily, weekly mock, or both
2. Who plays: whole team or quiz squad
3. Build route A, B or C, and who builds it
4. Uni sign-in and Notion sync: yes or no

# Ready before the January quizzes

**SEP** Decide the format today. Label review starts

**OCT** Reviewed mech / elec labels and the offline mock quiz

**NOV** Four-week pilot of the chosen format

**DEC** Adjust, pick the quiz squad and their areas

**JAN** Quiz-day drill, then the real quizzes (FSG: late January)

# Thank you!
